

|| Mercy Health Australia saves valuable time and eliminate risk of missing errors with Caristix HL7 solutions ||

Jin Yong Tham
is an Application Services Analyst at Mercy Health Australia.

When Jin's team identified a need for a simpler solution to perform HL7 message testing, finding a software vendor to automate these tasks became a priority. Searching online documentation, the Mercy team came across Caristix.

The Mercy Health team concluded Caristix Workgroup would be the ideal solution for their needs. The application would **automate** their existing manual **spec and message analysis, saving** Mercy Health valuable **time** comparing message types, segments, fields and data all the while **eliminating** the risk of missing **errors**.

As a result of using the Caristix tools to efficiently identify any data migration errors, the migration was so seamless that none of their users were aware they'd gone live with a new system. Going forward, the Caristix Workgroup will also be used to scrub data in an automated regularly scheduled time frame ensuring clean data.

"Thanks to Caristix's industry-leading solutions". Mercy Health is equipped with the right technology to ensure it continues on its mission today, tomorrow, and for the next 100 years.
